# **1. INTRODUCTION**

## **1.1 PROJECT OVERVIEW**

Crude oil is amongst the most important resources in today's world, it is the chief fuel, and its cost has a direct effect on the global habitat, our economy and oil exploration, exploitation and other activities. Prediction of oil prices has become the need of the hour, it is a boon to many large and small industries, individuals, the government. The evaporative nature of crude oil, its price prediction becomes extremely difficult, and it is hard to be precise with the same. Several different factors that affect crude oil prices. We propose a contemporary and innovative method of predicting crude oil prices using the artificial neural network (ANN). The main advantage of this approach of ANN is that it continuously captures the unstable pattern of the crude oil prices which have been incorporated by finding out the optimal lag and number of the delay effect that controls the prices of crude oil. Variation of lag in a period has been done for the most optimum and close results, we then have validated our results by evaluating the root mean square error and the results obtained using the proposed model have significantly outperformed

## **1.2 PURPOSE**

Crude oil price fluctuations have a far reaching impact on global economies and thus price forecasting can assist in minimising the risks associated with volatility in oil prices. Price forecasts are very important to various stakeholders: governments, public and private enterprises, policymakers, and investors. Energy has been a crucial production input in the production activities and economic growth and development processes of many countries. In fact, in the face of the global call for sustainable environment through the promotion of green energy sources, the role of fossil fuels, especially crude oil, cannot still be sufficiently relegated particularly in many industrialized and energy-dependent economies.

## 2. LITERATURE SURVEY

### 2.1 EXISTING PROBLEM

In recent years, the crude oil market has entered a new period of development and the core influence factors of crude oil have also been a change. Thus, we develop a new research framework for core influence factors selection and forecasting. Firstly, this paper assesses and selects core influence factors with the elastic-net regularized generalized linear Model (GLMNET), spike-slab lasso method, and Bayesian model average (BMA). Secondly, the new machine learning method long short-term Memory Network (LSTM) is developed for crude oil price forecasting. Then six different forecasting techniques, random walk (RW), autoregressive integrated moving average models (ARMA), Elman neural Networks (ENN), ELM Neural Networks (EL), walvet neural networks (WNN) and generalized regression neural network Models (GRNN) were used to forecast the price. Finally, we compare and analyse the different results with root mean squared error (RMSE), mean absolute percentage error (MAPE), directional symmetry (DS). Our empirical results show that the variable selection-LSTM method outperforms the benchmark methods in both level and directional forecasting accuracy

### 2.2 REFERENCE

1. A deep learning ensemble approach for crude oil price forecasting: Author: Yang Zhao, Jianping Li, Lean Y (2017)
2. Baumeister C, Kilian L, Zhou X (2013) Are product spreads useful for forecasting? An empirical evaluation of the Verleger hypothesis. Available at SSRN DP9572 Castle JL, Qin X, Reed WR (2009)
3. How to pick the best regression equation: a review and comparison of model selection algorithms. Working Papers in Economics 32(5):979– 986
4. Chiroma H, Abdulkareem S, Herawan T (2015) Evolutionary neural network model for West Texas intermediate crude oil price prediction. Apply Energy 142:266–273.
5. Cifarelli G, Paladino G (2010) Oil price dynamics and speculation: a multivariate financial approach. Energy Econ 32(2):363–372

## 2.3 PROBLEM STATEMENT DEFINITION

Oil demand is inelastic, therefore the rise in price is good news for producers because they will see an increase in their revenue. Oil importers, however, will experience increased costs of purchasing oil. Because oil is the largest traded commodity, the effects are quite significant. A rising oil price can even shift economic/political power from oil importers to oil exporters. The crude oil price movements are subject to diverse influencing factors.

This Guided Project mainly focuses on applying Neural Networks to predict the Crude Oil Price. This decision helps us to buy crude oil at the proper time. Time series analysis is the best option for this kind of prediction because we are using the Previous history of crude oil prices to predict future crude oil. So we would be implementing RNN (Recurrent Neural Network) with LSTM (Long Short Term Memory) to achieve the task.

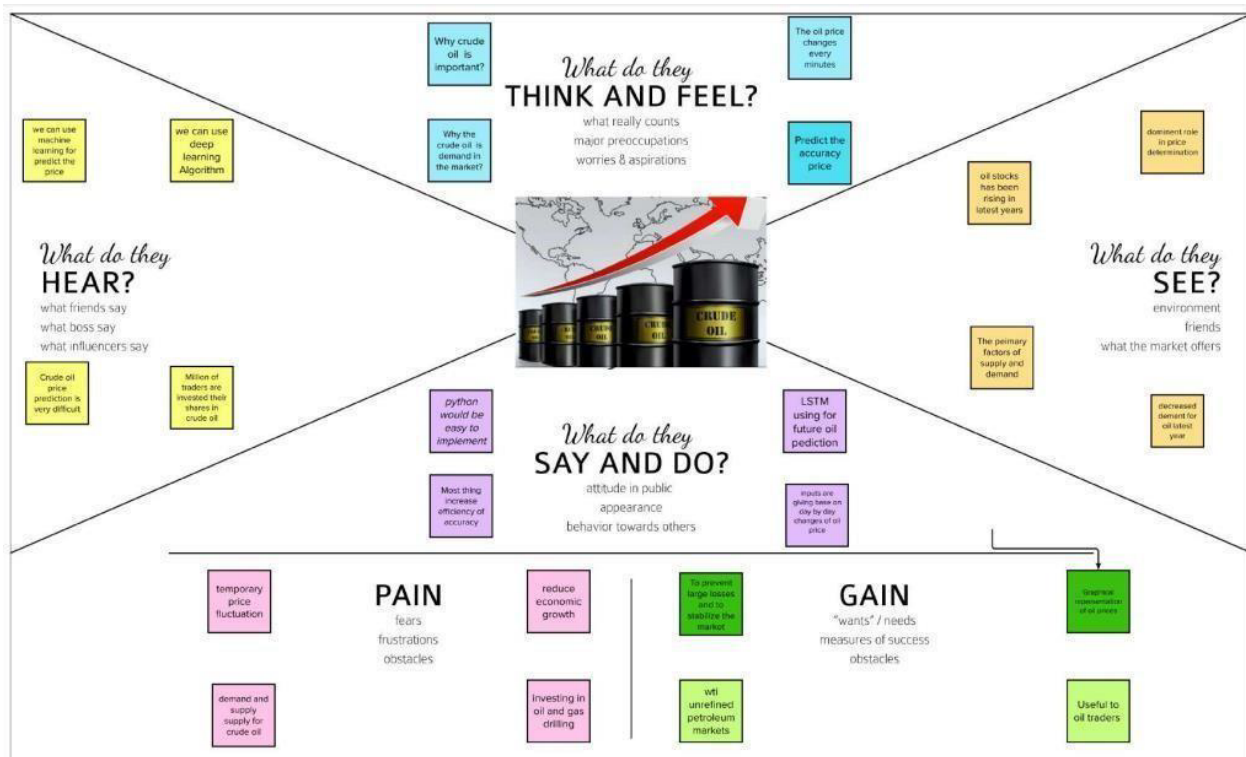

### 3. IDEATHON AND PROPOSED SOLUTION

#### 3.1 EMPATHY MAP CANVAS

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to help teams better understand their users.

Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

## 3.2 IDEATHON AND BRAINSTORMING

### Brainstorm & Idea Prioritization:

## Step 1: Team Gathering, Collaboration and Select the Problem Statement

Template

## Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

- 10 minutes to prepare
- 1 hour to collaborate
- 2-8 people recommended

### Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

10 minutes

#### Team gathering

Define who should participate in the session and send an invite. Share relevant information or pre-work ahead.

#### Set the goal

Think about the problem you'll be focusing on solving in the brainstorming session.

#### Learn how to use the facilitation tools

Use the Facilitation Superpowers to run a happy and productive session.

[Open article](#) →

### Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

5 minutes

### Key rules of brainstorming

To run a smooth and productive session

Stay in topic.

Encourage wild ideas.

Defer judgment.

Listen to others.

Go for volume.

If possible, be visual.

## Step 2: Brainstorm, Idea listing and Grouping

**2**

**Brainstorm**

Write down any ideas that come to mind that address your problem statement.

15 minutes

**3P**

No unrelated or duplicate ideas  
Stick to the word limit  
No more than 10 ideas

**SATHESH KUMAR S**

Deep learning can be used for analysis

History of prices can be used for references

Python can be used to represent the ideas

Can be predicted using the raw data

Artificial intelligence can be very effective in prediction

Sampling and records are useful for prediction

**VIGNESH M**

The integration of AI and machine learning will be useful

Visual representation can be done to get a better a about the data

Clear information should be gathered to implement the model

Price prediction can be done by go analysing the data from different time

The overall results can be recorded and used for the prediction

Prediction useful for knowledge about the crude oil prices

**3**

**Group ideas**

Take time after your ideas with clustering similar or related notes to you go. Once all sticky notes have been grouped, give each cluster a sentence (or label). If a cluster is bigger than six sticky notes, try and use if you and break it up into smaller sub-groups.

15 minutes

**Basic level**

Can be predicted using the raw data

Artificial intelligence can be very effective in prediction

Sampling and records are useful for prediction

**Advanced level**

Deep learning can be used for analysis

History of prices can be used for references

Python can be used to represent the ideas

The integration of AI and machine learning will be useful

### 3.3 PROPOSED SOLUTION

#### Proposed Solution Template:

The project team shall fill in the following information in the proposed solution template.

S.NO	PARAMETER	DESCRIPTION
1.	Problem Statement (Problem to be	The value of crude oil prices on the worldwide market is extremely difficult to anticipate due to the unpredictable variations in supply and demand as well as the impact of geopolitics.
2.	Idea / Solution description	We will gradually compile a dataset of historical oil price data, feed it to the model, train it, compile it, and then implement it in the web application after it has reached the ideal state.
3.	Novelty/uniqueness	Despite being an old concept, it will work better if periodic training is used.
4.	Social Impact / Customer Satisfaction	Customers may learn about the price of crude oil and profit financially by utilising the online app.
5.	Business Model (Revenue Model)	Customers may learn about the price of crude oil and profit financially by utilising the online app.

### 3.4 PROBLEM SOLUTION FIT

Define CS, J&P, TR into CC	<b>1. CUSTOMER SEGMENT(S)</b> Who is your customer?  Crude Oil Based Industries and companies for Business purposes	<b>6. CUSTOMER CONSTRAINTS</b> What constraints prevent your customers from taking action or limit their choices of solutions?  The risks and problems are the obstacles for the customers which limits them from proceeding further in the process.	<b>5. AVAILABLE SOLUTIONS</b> Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have?  The frustrations about the results can be avoided by providing a proper timeline and proper planning will be helpful in finishing it in time with the expected output.	Explore AS, differentiate
	<b>2. JOBS-TO-BE-DONE / PROBLEMS</b> Which jobs-to-be-done (or problems) do you address for your customers?  The difficulty in predicting the Crude Oil Price more accurately is one of the major problems  The information to be collected for providing the desired results may be a problem	<b>9. PROBLEM ROOT CAUSE</b> What is the real reason that this problem exists? What is the back story behind the need to do this job?  It can both Man-made error or machine error which can sometimes go wrong. This can cause a problem in proving an accurate or desired result. This is the main root cause of this issue.	<b>7. BEHAVIOUR</b> What does your customer do to address the problem and get the job done?  The problems faced by the customer can be reported in a form of a detailed document so that it can be properly addressed by the team and it can rectify.	Focus on J&P, tap into BE, understand RC
TR & EM	<b>3. TRIGGERS</b> What triggers customers to act?  The business ideas trigger customers for the crude oil price prediction for the benefits	<b>10. YOUR SOLUTION</b> If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits really. If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour.	<b>8. CHANNELS of BEHAVIOUR</b> 8.1 ONLINE What kind of actions do customers take online? Extract online channels from #7  Discount seekers Wandering customers Local customers	Extract online on CC

## 4. REQUIREMENT ANALYSIS

### 4.1 FUNCTIONAL REQUIREMENTS:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story/ Sub-Task)
FR-1	User Registration	Registration through Form Registration through Gmail
FR-2	User Confirmation	Confirmation via Email Confirmation via OTP
FR-3	Graph	Showing graph by obtaining the data from the dataset
FR-4	Support	Providing answers for the queries asked by users.
FR-5	News	Information of the oil prices will be updated by admin
FR-6	Notification	Notification will be sent for the users price alert
Fr-7	Database	Information of the User will be stored

### 4.2 NON-FUNCTIONAL REQUIREMENTS:

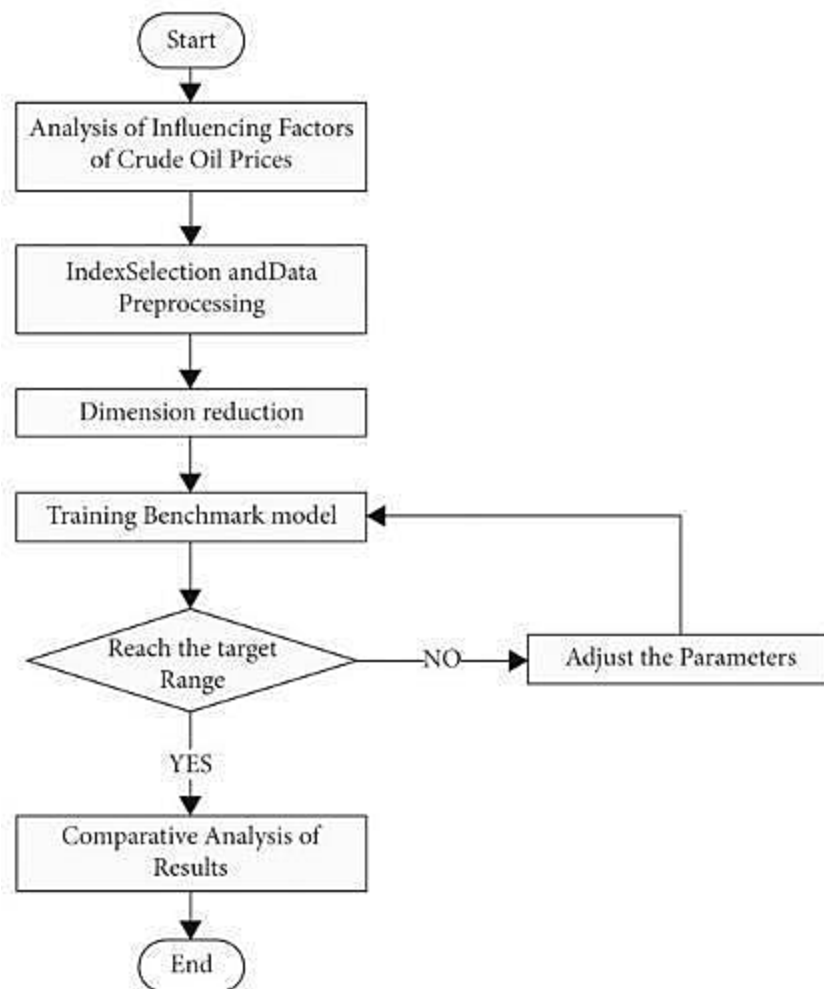

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	<b>Usability</b>	It can be used by a wide variety of clients as it is very simple to learn and not complex to proceed.
NFR-2	<b>Security</b>	We are using login for the user and the information will be hashed so that it will be very secure to use.
NFR-3	<b>Reliability</b>	It will be reliable that it can update with very little time period so that the accuracy will be good.
NFR-4	<b>Performance</b>	It will be performed fast and secure even at the lower bandwidth.
NFR-5	<b>Availability</b>	Prediction will be available for every user but only for premium user news, database and price alert will be alerted.
NFR-6	<b>Scalability</b>	It is scalable that we are going to use data in kb so that the quite amount of storage is satisfied.

## 5. PROJECT DESIGN

### 5.1 DATA FLOW DIAGRAMES

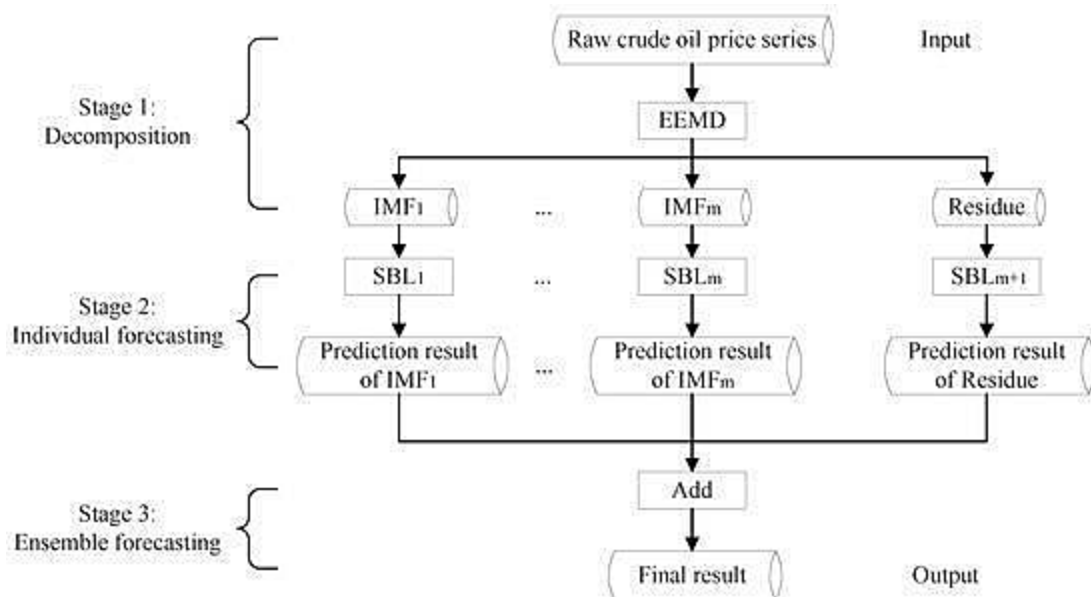

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

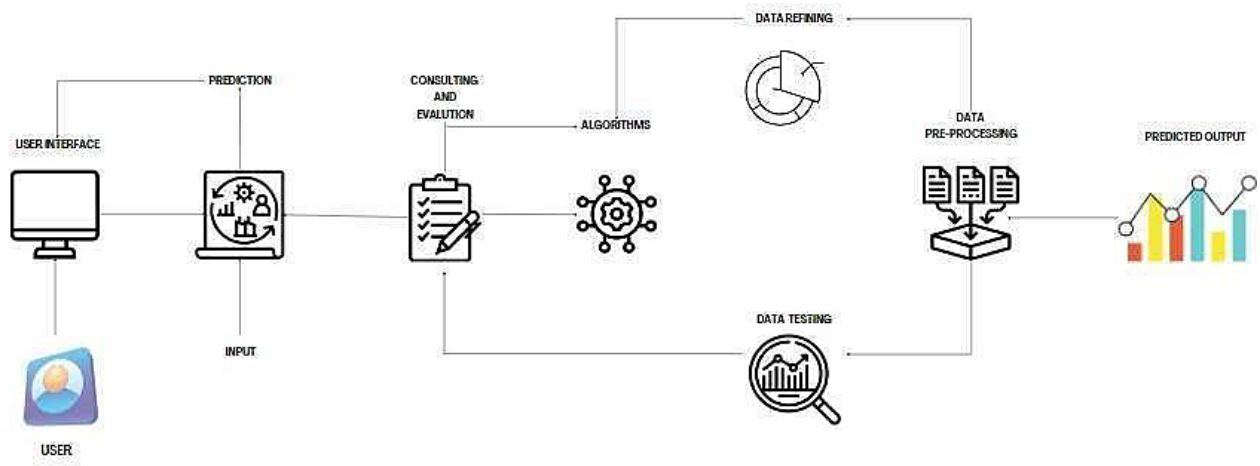

## 5.2 SOLUTION & TECHNICAL ARCHITECTURE

### SOLUTION ARCHITECTURE

- i. A complicated process with several sub-processes, solution architecture connects business issues with technological solutions. Its objectives are to
- ii. Find the most effective innovative solution for resolving current business difficulties. Understanding to project stakeholders the structure, traits, functionality and other features of the application.
- iii. Define objectives, phases for development and solution requirements.
- iv. Specific guidance for how the solution is established, developed and provided

# TECHNICAL ARCHITECTURE

## 5.3 USER STORIES

Use the below template to list all the user stories for the product

User Type	Functional Requirement(Epic)	User Story Number	User Story/Task	Acceptance criteria	Priority	Release
Customer (Mobile User)	Registration	USN-1	I may sign up for the program as a user by providing my email address, a password, and a password confirmation	I have access to my account, which shows line and bar graphs.	High	Sprint-1
		USN-2	If I register for the application as a user, I will receive a confirmation email	I can get a confirmation email and confirm it.	High	Sprint-1
		USN-3	I may sign up for the application as a user through Facebook.	I can sign up and access my account.	Low	Sprint-2
		USN-4	I may sign up for the application as a user using gmail.	Through my existing logged-in gmail account, I may sign up.	Medium	Sprint-1
	Login	USN-5	I may access the application as a user by providing my email address and password.	After signing up, I can only log in using my email and password.	High	Sprint-1
	Line\Bar graph		The model will provide predictions in Line Bar Graph Format when the inputs are entered.	I can obtain the anticipated result in a number of forms.	High	Sprint-3
Customer (Web user)	Login	USN-1	As a user of the internet, I can log in easily using my Gmail or Facebook account	It is possible to log in using a Gmail account that has already been set up.	Medium	Sprint-2
Customer Care Executive	Support		The customer service department will address any FAQ and also offer ChatBox	I am able to fix the issues caused by Support.	Low	Sprint-3
Administrator	News		Admin will provide the most recent oil price information.	Give the current oil pricing.	High	Sprint-4
	Notification		When oil prices change, the administrator will notify.	Gmail-based notification	High	Sprint-4
	Access Control		Admins have access control over	Users' authorization to access.	High	Sprint-4
	Database		Admins have access to user information.	keeps user information.	High	Sprint-4

## 6. PROJECT PLANNING & SCHEDULING

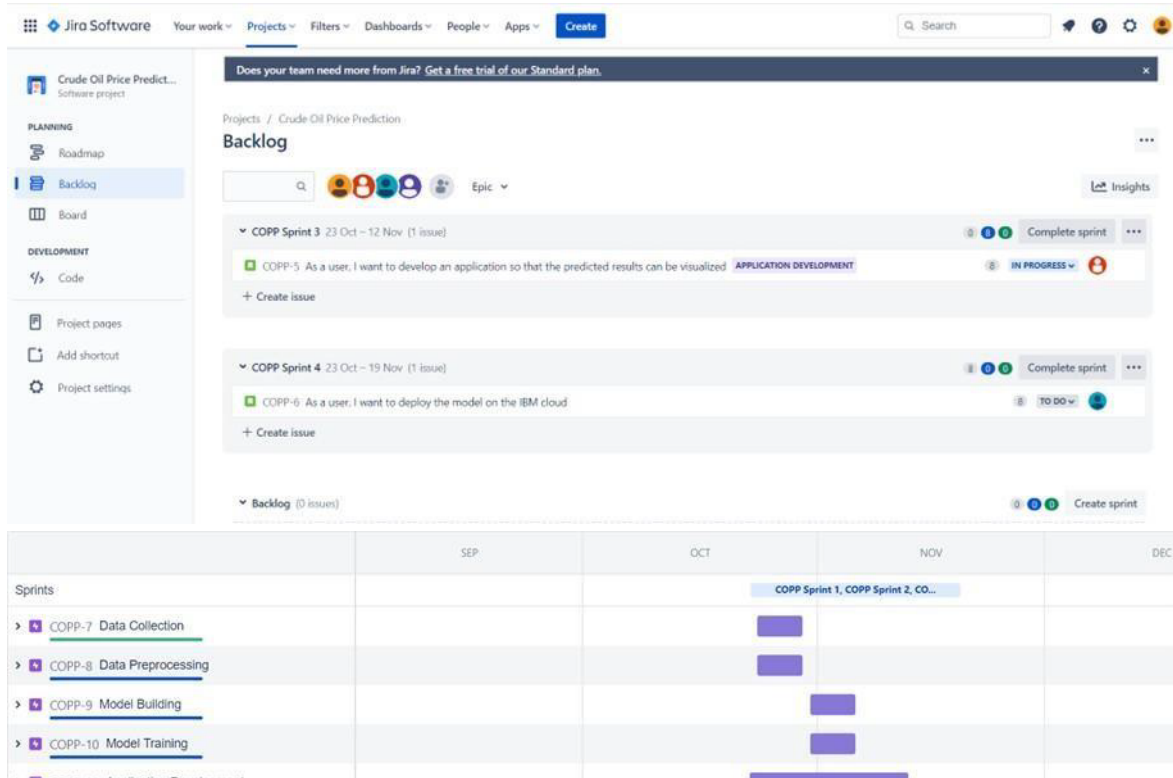

### 6.1 SPRINT PLANNING & ESTIMATION

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Registration	USN-1	I may sign up for the application as a user by providing my email, password, and password confirmation.	10	High	Suresh K
Sprint-1		USN-2	When I register for the application as a user, I will get a confirmation email.	10	High	Thirumal G
Sprint-1	Login	USN-3	I may access the application as a user by providing my email address and password.	15	High	Vignesh M
Sprint-2	Input Necessary Details	USN-4	I can enter information to predict the probability of crude oil as a user.	15	High	Sathesh Kumar S
Sprint-2	Data Pre-processing	USN-5	Put raw data into a format that will allow for prediction.	15	High	Suresh K
Sprint-3	Prediction of Crude Oil Price	USN-6	I can anticipate crude oil as a user using a Machine Learning model.	20	High	Vignesh M
Sprint-3		USN-7	As a buyer, I can predict the price of crude oil with accuracy.	5	Medium	Thirumal G
Sprint-4	Review	USN-8	I may comment on the application as a user.	20	High	Sathesh Kumar S

## 6.2 SPRINT DELIVERY SCHEDULE

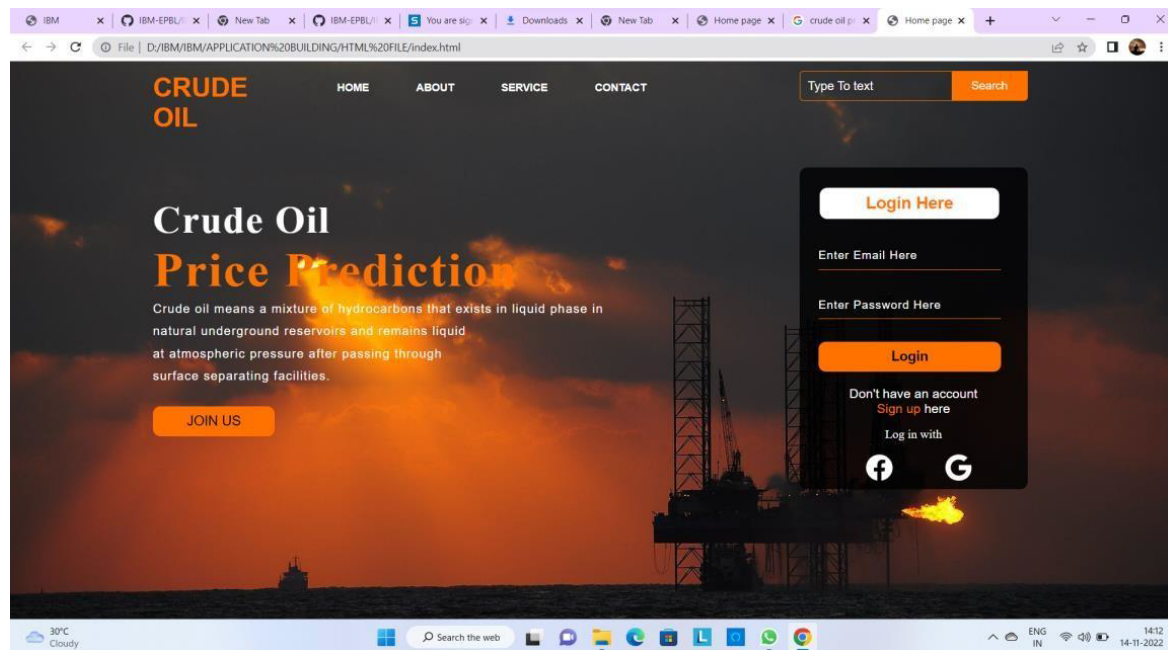

Sprint	Total StoryPoints	Duration	Sprint Start Date	Sprint EndDate (Planned)	Story PointsCompleted (as onPlanned End Date)	Sprint Release Date (Actual)
Sprint-1	8	6 Days	24 Oct 2022	29 Oct 2022	8	29 Oct 2022
Sprint-2	8	6 Days	31 Oct 2022	05 Nov 2022	8	05 Nov 2022
Sprint-3	8	6 Days	07 Nov 2022	12 Nov 2022	8	12 Nov 2022
Sprint-4	8	6 Days	14 Nov 2022	19 Nov 2022	8	19 Nov 2022

## 6.3 REPORTS FROM JIRA

## 7. CODING & SOLUTIONING

- i. The crude oil prediction website provides two options
  1. Home
  2. predict
- ii. The home allows the user to have an insight on the importance of crude oil price prediction
- iii. The predict allows the user to give the 10 days input and arrive at the prediction results.

# 9. RESULTS

## a. PERFORMANCE METRICS

S.No	Parameters	Values	Screenshot
1.	Model Summary		
2	Accuracy		

## **10. ADVANTAGES & DISADVANTAGES**

### **ADVANTAGES:**

- i. Prediction of crude oil price can help the importers to choose the right time to buy as they wait for the prices to fall down
- ii. Prediction of crude oil prices can help the exporters to increase the demand
- iii. It can even help in shifting the political powers
- iv. can assist in minimizing the risks associated with volatility in oil prices

### **DISADVANTAGES**

- v. The prediction results may lack accuracy
- vi. Volatility in prices may be misleading

## 11. CONCLUSION

LSTM network is better than other traditional neural networks for forecasting prices as it aims in using a back propagation model. Traditional neural networks such as CNN on the other hand predicts the next outgoing but doesn't necessarily save the previous data or connection which is based on feed-forwarding, in the sense the previous data is not necessary to predict the future data. LSTM focuses on storing the previous data and prediction which is rather encouraging and more approximate. The outcomes derived are relatively encouraging. The results show that large lookups do not necessarily improve the accuracy of the predictions of crude oil prices. Hence it can be concluded, the model with a single LSTM model is definitely the most accurate.

## **12. FUTURE SCOPE**

The project's future potential is enormous. The project can be implemented with the real-time functionalities that are necessary. Because it is quite versatile in terms of expansion, the project can be upgraded in the near future as and when the need arises. The complete prediction value can be increased in a much better, accurate, and error-free manner with the proposed approach. The project can be enhanced with realtime data.

<h3 style="font-family:system-ui;">
```

Demand for oil is inelastic, therefore the rise in price is good news for producers because they will see an increase in their revenue. Oil importers, however, will experience increased costs of purchasing oil. Because oil is the largest traded commodity, the effects are quite significant. A rising oil price can even shift economic/political power from oil importers to oil exporters. The crude oil price movements are subject to diverse influencing factors</h3>
